SUMMARY

Backend & Platform Engineer with ~5 years of experience at Oracle Financial Services Software (OFSS), building backend systems and ML platform infrastructure for on-prem environments and leading their migration to cloud-based SaaS on Oracle Cloud Infrastructure (OCI).

Developed core platform capabilities including dataset profiling, drift detection, and model serving systems, and contributed to scalable backend services and APIs powering the ML governance platform.

Strong in Java, Spring Boot, and distributed backend systems, with hands-on experience in Docker, Kubernetes, Git, and CI/CD.

WORK EXPERIENCE

Oracle Financial Services Software Limited (OFSS)

Bengaluru, India

Software Developer - ML Platform, Model Management & Governance (MMG)

Aug 2024 - May 2026

- Designed and built a **model serving platform** enabling deployment of ML models as REST APIs, allowing external consumption outside the MMG platform, with support for multi-model hosting, authentication, request-level logging, and Swagger UI-based testing.
- Led **end-to-end SaaS migration** of the MMG platform from on-premises to Oracle Cloud Infrastructure (OCI); ported the codebase, built SaaS services and jobs (WAR/JAR), and implemented a unified codebase strategy to maintain consistency across on-prem and SaaS deployments.
- Built **OCI DevOps CI/CD pipelines** for multiple MMG microservices to automate Docker image builds and artifact publishing (JAR/WAR) to Artifactory, standardizing build and release workflows across services.
- Enabled generation of both JAR and WAR artifacts within a single CI/CD pipeline, simplifying build workflows across services.
- Provisioned and managed OCI development instances using the AppMan pipeline with environment-specific configurations; handled instance lifecycle and supported release activities across MMG services.
- Developed a **createConda API** to provision isolated conda environments from Object Storage specifications, eliminating manual admin workflows and reducing environment setup time by ~80%.

Associate Software Developer - ML Platform, Model Management & Governance (MMG)

Jul 2021 - Aug 2024

- Reduced per-dataset storage by **99.9%** (GBs to KBs) by building a **scheduled profiling pipeline** (whylogs) that generates compact `.bin` profile files capturing per-feature stats across thousands of datasets.
- Developed **dataset analytics features** including profile comparisons, time-series visualizations, and correlation insights for feature-level monitoring.
- Designed and implemented a **data drift detection service**: aggregates profiles into baseline and target distributions, computes per-feature drift with configurable thresholds, and triggers automated alerts when data quality degrades.
- Engineered **backend APIs (Java, Spring Boot)** and **UI components (Oracle JET)** for dataset transformations, including reusable script templates to standardize transformation workflows across datasets.

SKILLS

Languages: Java 17, Python, SQL, JavaScript

Backend: Spring Boot, FastAPI, REST APIs, Microservices, API Design

Databases: SQL, Relational Databases (Oracle), SQL Developer

Cloud & DevOps: Oracle Cloud Infrastructure (OCI), Docker, Kubernetes, CI/CD Pipelines, Artifactory, Git

Engineering Practices: System Design, Distributed Systems, Agile/Scrum, API Testing, Debugging, Code Review

EDUCATION

National Institute of Technology Warangal (NIT Warangal)

Jul 2017 - Jun 2021

B.Tech, Computer Science & Engineering

- Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database, Operating Systems
